

Hellenic Data Management Symposium (HDMS) is the annual forum for the Greek database community to present and discuss recent advances in the data management field. After a successful series of nine events, the 10th symposium will be held in Athens on 17th and 18th of June 2011, right after SIGMOD.

The program of HDMS 2011 will include research and application paper presentations, tutorials, panels and demonstrations of research prototypes. The key criterion in judging submissions is that of technical content. As such, papers recently accepted for presentation in top international conferences may be submitted to HDMS as well and considered for inclusion in the unofficial HDMS proceedings.
